

DhruvaKumar Jonnagaddala

Cloud Solution Architect · Multi-Cloud Transformation & Enterprise Architecture

Bangalore, India (Open to Remote)
+91 98808 91474 · erion225@gmail.com
github.com/dhruvj225

CORE COMPETENCIES

- Solution & Enterprise Architecture
- Cloud Strategy & Adoption
- Multi-Cloud (AWS/Azure/GCP)
- Migration & Modernization
- Zero Trust & Compliance
- DevSecOps
- Platform Engineering
- IaC (Terraform/CFN/Ansible)
- Kubernetes
- CI/CD & GitOps
- Observability / SRE
- Stakeholder Management
- Cost Optimization
- DR & High Availability
- Generative AI & Agentic Platforms

CERTIFICATIONS

HashiCorp Certified: Terraform Associate
CloudBees Certified Jenkins Engineer

CLOUD PLATFORM SERVICES

AWS

EC2, ECS, EKS, Lambda, S3, RDS, VPC, IAM, CloudFront, API Gateway, CloudFormation, CloudWatch, DynamoDB, Bedrock, Bedrock AgentCore, Route53, WAF, Direct Connect, Transit Gateway

Azure

AKS, Azure DevOps, API Management (APIM), Azure AD, Application Gateway (WAF), Private Link, Azure Functions, Front Door, Azure Firewall, ExpressRoute

GCP

GKE, Cloud Run, BigQuery, BigTable, Compute Engine, Cloud Build, Cloud Armor, VPC Service Controls

EDUCATION

B.Tech

SASTRA University, India
2005 – 2009 · CGPA 8.09/10

SUMMARY

17+ years in IT with 8+ years architecting and leading enterprise-scale cloud transformation, migration, and modernization programs across AWS, Azure, and GCP for global retail, fintech, insurance, luxury, and cybersecurity organizations. Proven record designing secure, compliant, and cost-optimized multi-cloud architectures — from Zero Trust, PCI DSS Level 1 payment platforms to large-scale Kubernetes and IaC-driven infrastructure. Skilled at translating business objectives into cloud adoption strategies, establishing governance and DevSecOps operating models, and engaging stakeholders from engineering teams through to executive leadership. Passionate about mentoring engineers and architects and building self-sufficient, future-ready platform teams.

PROFESSIONAL EXPERIENCE

Senior DevOps Lead (Cloud Solution Architecture & Platform Engineering) · Equal Experts

Aug 2023 – Present

Bangalore, India (Remote)

- Defined the target-state cloud architecture and migration roadmap for the payments platform, evaluating **rehost, replatform, and refactor** options against compliance, cost, and scalability requirements.
- Designed and delivered AWS cloud infrastructure for a unified payments platform (orchestration, gateway, subscriptions) for client TrueGate, achieving PCI DSS Level 1 compliance through a Zero Trust architecture built in from day one.
- Established cloud governance guardrails — **IAM policies, network segmentation, and encryption standards** — enforced as policy-as-code across all environments.
- Architected Terraform-managed infrastructure with fully automated CI/CD and container orchestration, sustaining a 99.9% uptime SLA with automated high-availability failover.
- Led architecture design reviews with client engineering and security teams, producing **architecture decision records (ADRs)** and reference patterns adopted across delivery teams.
- Acted as trusted technical advisor to client stakeholders, translating fintech compliance and scalability requirements into cloud architecture decisions.
- Evaluated multi-cloud placement options across **AWS, Azure, and GCP** for future workloads, balancing cost, compliance, and vendor lock-in.
- Building an AI-powered support assistance bot on **AWS Bedrock and Bedrock AgentCore** to automate and streamline internal support workflows, integrating it into the existing platform engineering toolchain.

Sr DevOps Cloud Platform Engineer · Servana Managed Services

Sep 2021 – Jul 2023

Bangalore, India

- Delivered cloud transformation engagements for clients across Retail, E-Commerce, Cybersecurity, and Fintech on AWS, GCP, and Microsoft Azure, meeting demanding deadlines and high standards of craftsmanship.
- Architected reliable, secure, cost-optimized platforms using infrastructure-as-code and automated delivery pipelines, with granular role-based access control at every layer.
- **LVMH Digital** — architected and delivered an automated website-performance benchmarking platform: ~2,500 Jenkins pipelines across 5 geo-distributed clusters (US, EU, Asia), storing results in Google BigTable to run 10,000+ tests/week across 200+ web properties for 75 LVMH Houses.
- **Global Insurer** — led the architecture and migration from on-premise Rancher Kubernetes to fully managed Azure AKS; rebuilt CI/CD with Azure DevOps and Helm, adopted GitOps for deployment traceability, deployed Azure API Management for centralized API governance, and implemented Zero Trust security (Private Link, WAF-enabled Application Gateway, Azure AD).
- Defined and managed end-to-end DevSecOps tooling strategy (productivity, monitoring, security, source control, CI/CD, testing, container orchestration, IAM) across a hybrid-cloud platform, sustaining 99.99% availability.
- Designed CI/CD architecture for mobile app delivery, including autoscaling macOS build infrastructure on VMware ESXi and automated code signing via Fastlane.

Senior DevOps / Cloud Platform Engineer · Waitrose (UK Top Retailer)

Aug 2019 – Aug 2021

Bracknell, United Kingdom

- Led the architecture and transformation of legacy infrastructure (IBM WCS) to a self-managed AWS cloud platform supporting large-scale e-commerce growth; designed a self-service portal for automated resource provisioning and de-provisioning.
- Managed multi-cloud environments (AWS and GCP) across e-commerce business units and architected highly available Kubernetes clusters with zero-downtime microservice deployments.
- Established Infrastructure-as-Code (CloudFormation, Terraform) and Configuration-as-Code (Ansible, including custom modules/plugins) standards adopted platform-wide.
- Architected disaster-recovery automation and end-to-end observability (ELK, CloudWatch, Grafana, Prometheus, PagerDuty) for 150+ microservices, minimizing production impact during releases.
- Designed Blue/Green/Canary CI/CD pipeline architecture (Groovy DSL) and governed the DevOps tooling lifecycle (Jenkins, Nexus, SonarQube, Contrast, Keycloak).

DevOps / Cloud Platform Engineer · Servana Managed Services

Sep 2018 – Aug 2019

Bangalore, India

- Delivered end-to-end procurement, architecture, and lifecycle management of a **Kubernetes-hosted DevOps toolchain** spanning productivity, monitoring, security, CI/CD, and IAM, sustaining **99.99% platform availability**.
- Architected CI/CD for mobile app delivery, migrating iOS/Android pipelines from **Bitrise to Jenkins** with automated code signing.

DevOps Engineer · JCPenney

Feb 2018 – Sep 2018

Bangalore, India

- Automated configuration management and patch upgrades for **WebLogic, WebSphere, and Linux** estates using Ansible, standardizing a previously manual upgrade process across 49-state retail operations.
- Led the **Netcool-to-Splunk migration** and automation, modernizing enterprise monitoring and incident visibility for the operations team.
- Automated **NetScaler Big-IP certificate renewal** using Python and Selenium APIs, eliminating a recurring manual process prone to outage risk.
- Automated **Jira user and license administration** via Python and Jira's REST API, streamlining IT service management workflows.

DevOps Engineer → Release & Automation Engineer · Tata Consultancy Services

Apr 2010 – Jan 2018

Chennai / Uruguay / Bangalore

- **Waitrose engagement** — led automation of **AWS infrastructure provisioning** for the Waitrose e-commerce migration from IBM WCS to AWS, managing DTAP environments, risk mitigation plans, and delivery reporting for cross-functional teams.
- **Target Corporation (Environment Automation)** — architected a self-service environment-provisioning platform using OpenStack Heat and Chef, cutting environment build time from **3 months to 1 hour** and migrating **140 environments** to the cloud in 4 months, while sustaining **99.99% environment stability** via Elastic Load Balancers and Sensu monitoring.
- **Target Corporation (Release & Build Engineering)** — standardized and automated build practices across ~40 project teams spanning **200+ applications, 50+ Unix/Windows servers, 100+ Oracle/SQL databases, and 400 WebSphere JVMs**, cutting delivery time by **70%, cost by 40%, and defects by 65%**; identified a cloud database migration opportunity that eliminated **80% of hardware costs** in Dev/Test.
- **Target Corporation (Release & Support Management)** — resolved environment, certificate, and configuration issues across Control-M, WebSphere, Unix/Windows, and Oracle estates; planned and executed cyclic data/region refresh cycles across **50 regions and 35 databases**, and managed code versioning and release scheduling to reduce conflicts.
- Led and mentored delivery teams — setting goals, conducting performance reviews, and representing project audits for TCS leadership.
